

## INJECTION-MOULDED PART PACKAGING SYSTEM

The system takes injection-moulded parts from a handling system and feeds them into the packaging process. Several layers are stacked in each box. These are separated by a separating layer. The boxes are fed via a buffer line and separated.

### ■ REQUIREMENTS

- Coupling with the injection moulding machine
- Handling cardboard boxes
- Many variants

### ■ PROCESS

- Feeding the injection-moulded parts
- Pre-positioning
- Handling injection-moulded parts
- Handling the intermediate layer
- Separating and positioning cardboard boxes

### ■ MACHINE DATA

Place of manufacture: Unimatic Germany

Industry: Plastic injection moulding

Operating location: Germany

Year of construction: 2021
